

## ALARA POLICY

1)

Part III of Chapter 64E-5, Florida Administrative Code (FAC), establishes standards for protection against radiation hazards. Section 64E-5.002, FAC, states that the minimum standard for protection against radiation hazards is that the radiation dose to any individual shall be as low as reasonably achievable, consistent with the applicable regulatory requirements.

engineering controls based upon sound radiation protection principles to achieve occupational and public doses that are As Low As Reasonably Achievable (ALARA). Management, the radiation safety officer (RSO) and all authorized users must participate in the establishment, implementation and operation of a radiation protection program that applies the **ALARA** philosophy of minimizing exposures to radiation.

The primary concept of the **ALARA** philosophy is that unnecessary exposure to radiation should be avoided, even though current occupational exposure limits provide a very low risk of injury. The objective is to reduce occupational exposures (both individual and collective) as far below regulatory limits as is reasonably achievable.

b.

The undersigned certify that the commitments set forth above have been implemented.
